It's a real pleasure

to send you our new spring catalog. We do our best to make an attractive booklet, designed for easy reference and ordering. We hope you like it and invite your comments and criticism.

Of course our specialty is Geraniums but we also take pride in supplying you with other lovely plants to lend more charm and beauty to your home.

Also we wish you would visit our Greenhouses. Really, it is worth several hours of your time and we just know you would be delighted. Also plants are cheaper at our greenhouses—for you save the packing and mailing costs.

COME TO RACCOON, Indiana, 40 miles west of Indianapolis, 13 miles south of Crawfordsville, and 6 miles north of U. S. 36, on U. S. 231, (old State Road 43).

We are open on Sundays so just drop in anytime and we will do our best to make you feel at home.

HOW TO GROW GERANIUMS

GERANIUMS OUTDOORS

Soil: Any garden that will grow common annual or perennial plants will grow Geraniums. If the soil is too rich, Geraniums produce soft, leggy branches, dense foliage and a scarcity of bloom.

If the soil is too poor, they produce pale foliage and small blooms. Ideal soil is slightly acid (about pH 6.5), 3 parts clay loam, 1 part coarse sand, and 1 part organic matter.

Sun: Geraniums require a lot of sunshine, yet, if at all possible, they should be shaded during the hottest part of the day to produce the best flowers. Geraniums will not do well in complete shade.

Water: When the soil appears dry, soak to a depth of at least 6 inches. It is much better to soak the ground once or twice a week than to sprinkle the soil every day. Always water early enough in the day so that the foliage will be dry by night.

GERANIUMS INDOORS

Soil: Mix together 3 parts good garden soil and 1 part peat moss, pack dirt firmly around plants. Have the soil moist, but not wet, when potting.

Containers: Repot our 2¼-inch plants in 3-inch pots. Do not use too large a pot for Geraniums, they bloom best when a little pot bound. It is better to repot the plants, increasing the size pot each time. Leave at least ½-inch of space at the top of each pot for watering, leave more room for larger containers. Always have good drainage.

Sun: To bloom indoors, Geraniums must have direct sun. Place them as close to the glass as possible.

Space: For beautiful beds allow only 8 inches in all directions for spreading. Pinching the tops of each plant will promote branching but will delay blooming several weeks.

Fertilizer: Bonemeal is excellent; mix in a liberal amount while preparing your soil. For additional feeding we recommend Plant Marvel.

Geraniums growing outdoors will drop most of their foliage if dug and potted for inside use during the winter. It is better to take cuttings from the older plants and start with fresh plants for indoor growing. Take cuttings, anytime, 4 to 6 inches long from strong branches that have leaves growing close together. Remove the leaves far enough up the stem to allow the cutting to stand upright when placed in moist sand. This sand should be about 4 inches deep in a box placed in a sunny spot. Cut a narrow trench in the sand and stick the cuttings to a depth of about 2 inches, then pat the sand firmly. Keep the sand moist; roots should appear in 3 weeks.

Water: Do not allow the soil to become water-logged or soggy. Once a week, especially on a sunny day, soak the plant. The rest of the time only enough to keep it from drying out.

Feeding: Do not feed unless the plants have stopped growing or the foliage is too pale. Use any good fertilizer. If you use Vigoro, put a small pinch on top of the soil before watering the plants. We like to use Plant Marvel—it is completely soluble in water. Do not over-feed—Geraniums do not require heavy fertilization.

Geraniums grown indoors during the winter may be planted outside in the spring, after the danger of frost is past.

To Help You Grow Them

Condition Your Soil

Plant Marvel

"Feed as you Water"

Easily Applied

Economical
to Use

- Loosens heavy soil
- Adds body to sandy soil
- Speeds seed germination

You can see the difference in plant growth when you condition your soil with Terra-Lite. Not a fertilizer but rather a granular mineral containing billions of tiny air cells that trap and store oxygen and water then release them as needed for luxuriant growth.

PLEASE READ BEFORE ORDERING

INFORMATION, TERMS, ETC.

General Terms—Cash with Order. We pay delivery charges on all orders of \$3.00 or more, to any point in the United States, unless otherwise stated. On orders of less than \$3.00, please include 25c to cover costs of postage, packing and handling.

Method of Shipment—All plants are carefully wrapped and packed. Shipment is made the best and cheapest way. Small orders are sent by Parcel Post, large orders by Prepaid Express. If you are unable to receive orders by Express, please advise when placing your order.

Special Services—Either Special Handling or Special Delivery may save a delay of one to several days, which could mean very much in the growth of your plants. If either service is desired, please include remittance to cover. On orders of less than \$5.00, the charges are usually 20c for Special Handling and 45c for Special Delivery. (Special Delivery includes Special Handling.) Air Parcel Post is very satisfactory, but expensive. If this method of transportation is desired, please include enough in your remittance to cover the additional charge.

Substitution—We attempt to keep a complete stock of the items listed in this catalog. As there are many factors entering into the production of plants, occasionally we are unable to supply certain items ordered. If we may substitute, please so indi-

cate on your order blank, and if possible, give second choice. Otherwise, a refund will be made on those items we are unable to ship.

We Guarantee Satisfaction—If you are not pleased with your order, or if it reaches you in poor condition, please advise at once. If possible a replacement will be sent to you. If not, your money will be refunded. Should there be a mistake on your order, advise promptly, and we will do our best to correct it. No claims on damaged plants will be given consideration if made more than 10 days after receipt of your package.

All plants listed in this catalog are young, potted plants, in a healthy growing condition, and are shipped to you in the soil in which they are growing. Many of these plants are produced from seed, and, because of some variance in all flower seeds, occasionally a plant will be off color, or may grow a little different than noted in description. Even from seed, varieties should produce 95 percent true-to-name. Plants propagated from cuttings should be 100 percent true.

Warranty—*Because of the many conditions affecting plant growth, we make no warranty, express or implied, as to the productiveness of plants or bulbs listed herein, and we will in no case be liable for more than the original purchase price.*

FITTONIA

FT-503—Brilliant emerald green leaves with beautiful contrasting white veins. Very distinctive foliage plant of compact growth; an ideal choice for your planter or dish garden.

75c each; 3 for \$2.00

EPISCIA

EP-504 (*E. cupreata viridifolia*)—"The red African Violet." Bright red trumpet shaped flowers shown to advantage above Nile green quilted leaves. Beautiful foliage has trailing habit that lends grace to windows and brackets. Really a second cousin of the Violet but is just as easily grown and requires the same cultural care. Limited supply.

\$2.50 each

IVY LEAF GERANIUMS

Ivy Leaf or Trailing Geraniums will lend a new beauty wherever a trailing or climbing effect is desired. Unexcelled for pot plants, hanging baskets, ground cover and window boxes. The stronger colored varieties are best for sunny locations while the softer shades do better in places shaded from the mid-day sun.

See pages 8 and 9 for descriptions of the best known and most satisfactory varieties. *Charles Turner pictured above.*
